Green Line

ULTI+ R32 CC+

Reversible single flow heat pump coupled with one or several condensing boiler(s)

MADE IN FRANCE

www.ett-hvac.com

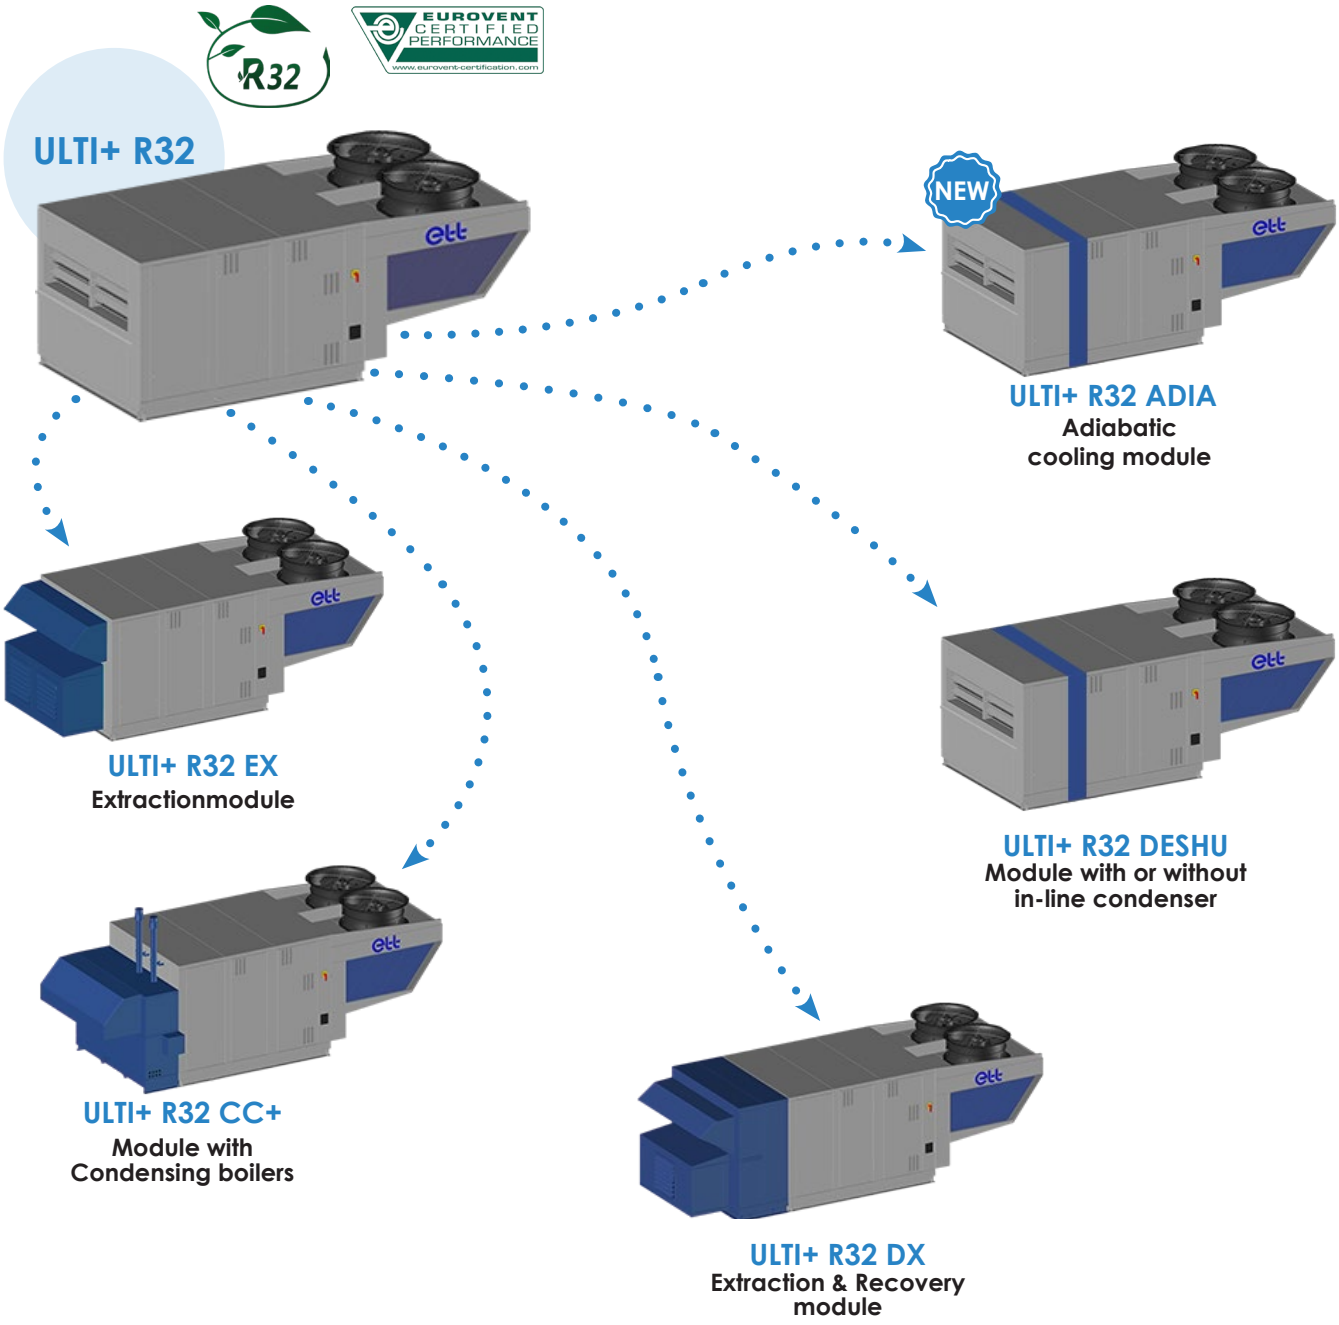
ULTI+ R32 CC+: Machine from the ULTIMA Green Line range

The **ULTIMA Green Line** is ETT's latest-generation modular **rooftop range.** It combines **quality materials**, **performance**, **energy savings**, **acoustics**, **regulation** and **new-generation** connected components to ensure that the units operate at optimum efficiency at all times.

An **unrivalled product line-up** (flow rates/power) that **perfectly meets the weight and space requirements** of existing units to be replaced.

The modular design makes it easy to extend the range's capabilities. Users can choose to install the **standard ULTI+ R32 heat pump**, or add modules (condensing boiler(s), extract unit, extract unit with rotary energy recovery, dehu, adiabatic module) to this single-block unit in order to adjust the unit's performance to the environment and the requirements of the application.

ULTIMA Green Line modular principle



ULTI+ R32 CC+: ErP Rooftop

When they adopted the KYOTO protocol, the Member States of the European Union (EU) voted a set of measures known as the "energy-climate package", aiming at:

- ✓ reducing greenhouse gas emissions by 20%;
- ✓ reducing energy consumption by 20%;
- ✓ increasing the proportion of renewable energies to 20% of the final energy consumption

To achieve these objectives, the ErP directive (Energy related Products) 2009/125/EC Eco-Design has been adopted.

This directive applies to all products using energy or having an impact on energy consumption. It encompasses a **« package of regulations »** setting performance requirements for each type of product. EU regulation **2016/2281 covers air heaters, cooling appliances, high-temperature industrial chillers and fan coil units**.

- **1st January 2021**

Information on CC+ and other warm air heaters:

Nitrogen emissions, expressed as nitrogen dioxide, from warm air heaters (including those integrated into rooftops) must not exceed the following values:

- **26 Sept. 2021**

  70 mg/kWh HHV

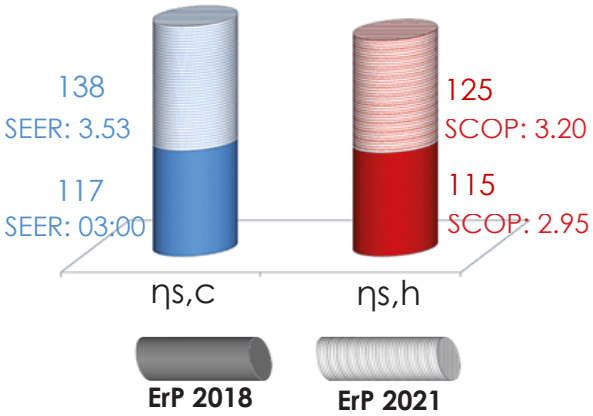
Since 1 st January 2018, rooftops that do not comply with ErP Regulation EU 2281/2016 shall no longer be marketed in Europe.

Regulatory impacts since 1st January 2018

The European Parliament compels rooftop manufacturers to comply with Regulation (EU) 2281/2016 on ErPs, in order to give the users the possibility to evaluate their energy consumption.

A new method for assessing the energy efficiency of rooftops has been defined under this regulation, which specifies the minimumEco-Design requirements:**seasonal efficiency**.
This new measure gives a **more realistic indication of the energy efficiency** of a heating or air-conditioning system and its impact on the environment.

Seasonal yields to be achieved according to ErP 2018 or ErP 2021.



A summary sheet specifying **rated power & seasonal efficiency** is available on request.

SCOP

Seasonal Coefficient of Performance

The SCOP is the ratio between annual heating demand to the reference climate and the annual electricity consumption for heating.

$$\eta s,h = \frac{SCOP}{2.5} - 3\%$$

SEER

Seasonal energy efficiency

The SEER is the ratio between annual cooling demand to the reference climate and the annual electricity consumption for cooling.

$$\eta s,c = \frac{SEER}{2.5} - 3\%$$

2.5: Primary energy conversion coefficient
3: Factor corresponding to regulation.

CONTENTS

General description

The **ETT** packaged unit is delivered ready to operate. Its full aluminium structure (frame and casing) ensures an excellent corrosion protection (20-year anti- corrosion guarantee).

Aluminium promotes the REFURBISHING of machines for a second life: Aluminium allows our machines to be refurbished for a second life, unlike a steel structure.

Environmental impact :

The Ultima Green Line is environmentally responsible and uses the R32, a refrigerant with low environmental impact:

- ✓ Zero ozone depletion (ODP)
- ✓ Global Warming Potential (GWP) of 675

Our technical choices have a major impact on the environment

- **DECARBONATION:**

ETT is committed to an ambitious approach to reducing Greenhouse Gas Emissions:

- Reducing the energy consumption of our machines
- Fluid refrigerants with low GWP
- Energy monitoring & AI
- Adiabatic cooling
- Development of machine retrofits

- **ALUMINIUM: PERFORMANCE AND DURABILITY!**
  - Lightweight: 3 times lighter than steel
  - Corrosion resistant and long lifespan
  - Thermal performance
  - 100% recyclable indefinitely
  - Facilitates the refurbishing of our machines

- **ECO-DESIGN:**

Our technologies are designed with sustainability in mind, reducing their environmental impact throughout their life cycle.

- **LOW-POLLUTION MANUFACTURING PROCESS:**
  - Selective sorting: 80% recovery rate
  - No paint or solvents

- **END OF MACHINE LIFE:**

In compliance with regulations, ETT is a member of the Ecologic eco-organisation for the end-of-life processing of machines, which are 98% recyclable.

EcoLogic

- **ETT CERTIFICATIONS**

- **CSR assessment: ECOVADIS Gold Medal** for our CSR approach

- **Iso 14001 & Iso 9001 certification** for our Quality and Environmental Management system

- **Certificate of competence for handling refrigerants**

- **Membership of the UN Global Compact**

- **Qualiopi certification** for our training centre

As a positive-impact company, ETT contributes to a more sustainable world through our decarbonising products and services.

CE In addition, each unit is delivered with an certificate of conformity to EU standards and complies with the following standards:

- Machinery Directive 2006/42/EC - Operator's safety
- Low Voltage Directive (LVD) 2014/35/EU - Electricity
- Electromagnetic Compatibility (EMC) Directive 2014/30/EU
- Regulation (EU) 2016/426 – Gas appliances
- Standard NF EN 60204 -1- Electrical appliances
- Standard EN 378-2 : 2017 – Safety and environmental requirements
- PED Directive 2014/68/EU (in accordance with Articles 2.10, 2.11, 3.4, 5a and 5d of Annex 1) - Pressure equipment
- EcoDesign regulations ErP UE 2281/2016

20-year guarantee against corrosion frame - casing

ENERGY SAVING

ENVIRONMENTAL ATTITUDE

SERVICE LINK

Unit description

20-year guarantee against corrosion frame - casing

Aluminium frame and casing assembly

Optimised tightness and thermal insulation.

Reduced weight, for new and refurbish projects.

Multiple airflow configurations available.

20-year anti-corrosion guarantee.

Eco-design filtration

Low pressure drop.

Analogue clogging controller.

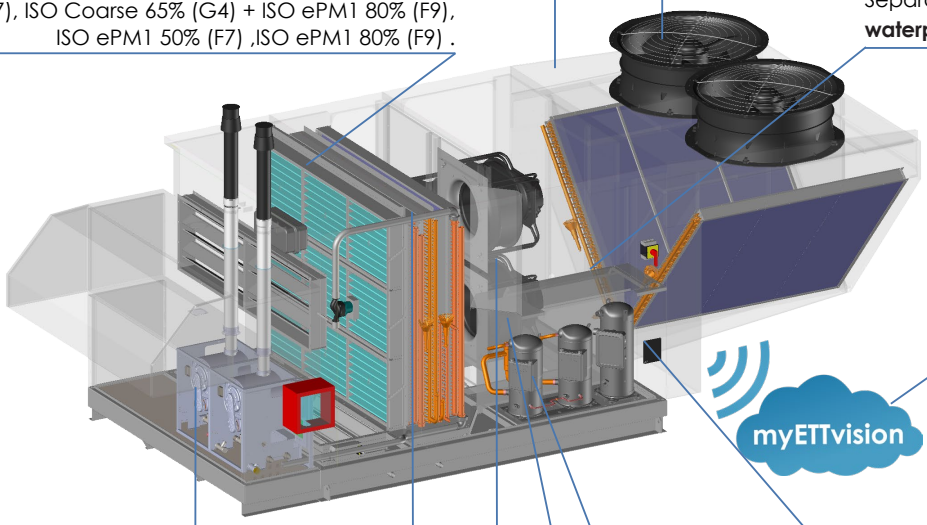
Options ISO Coarse 65% (G4) refillable, ISO ePM10 50% (M5), ISO Coarse 65% (G4) + ISO ePM1 50% (F7), ISO Coarse 65% (G4) + ISO ePM1 80% (F9), ISO ePM1 50% (F7) ,ISO ePM1 80% (F9) .

Propeller fans

Variable-speed, communicating axial fans, bionic blade design, electronically commutated « EC », motor, optimum efficiency and low noise levels.

Waterproof electrical enclosure

Separate electrical board in a **IP44 waterproof enclosure** for greater safety.



Connected components

Optimum unit operation.

Connection to myETTvision communication platform possible

myETTvision

Condensing boiler(s)

Highly modular capacity with 1 to 4 boilers of 63 kW HHV.

New generation PLC with display

Control enabling optimum operation in all conditions.

Thermal heat exchangers

Optimized heat exchanger for improved energy performance.

Vinyl option available.

Multi-stage circuit with R32 new generation compressors

Optimum performance whatever the part load.

Electronic expansion valves.

R32

Internal fans

Variable-speed fans with air flow rate measurement.

Analogue air flow controller (AFC), communicating, direct transmission, « EC » electronically commutated motor optimum performance and low acoustic level.

Low Noise option available.

AFC option available with flow rate auto-adjustment.

Leak detection

Reduces the number of periodic visits.

** ErP (Energy related Product) 2021: the Ultima Green Line range meets the eco-design regulatory requirements applicable to air heaters and cooling appliances (Regulation 2016/2281).*

Unit description

Energy
savings

The ULTIMA Green Line range is an efficient,economical and environmentally friendly solution for heating or cooling buildings.

Thanks to its design, ULTI+ R32 CC+ provides **precise regulation for optimum, continuous energy performance throughout** its years of operation.

QUALITY
Premium process and components

- **Sustainable and recyclable equipment**: **Aluminium frame and casing,** 100 recyclable, 20 year anti-corrosion guarantee
- Non-polluting process
- **Eco Design approach** to combine **economy** and **optimum performance** (SEER, SCOP)
- Simplified replacement of existing units; **identical existing roof curbs**
- Reduced unit size and weight

Access
and flexibility

- **Technical compartment** allowing quick and easy access to the air streams.
- Free and simplified access to **the filters by removable panels**.
- **Accessible components** for **maintenance purposes.**
- **Wide range of power ratings** to suit the needs of each project
- **Numerous airflow configurations**, to meet integration requirements

Connected components
New Generation PLC

- allows communication between units
- transfers the technical data from the units to an external server for optimum remote control with myETTvision.

R32 fluid
Low GWP

- New **ULTIMA Green Line** range with R32, a low GWP fluid (675).
- **plays an active role in meeting the CO_2** equivalent tonnage quota a legal obligation imposed on gas producers/ importers.
- minimizes the impact on the greenhouse effect.

Module CC+
with one or several condensing boiler(s)

FOR COLD ENVIRONMENTS

The CC+ module is used as an auxiliary, to complement the thermodynamic system or to replace it if the outside temperature is too low.

Acoustic
performance

MAIN FEATURES

- **New generation variable-speed propellers and fans**
- **Control system adjusting rotation speed to power stages**

Because respect for the sound environment is essential, we offer **standard stand-alone units** that **meet your acoustic constraints**.

ETT goes the extra mile...

Installation

Outdoor, on the rooftop or at ground level.

ETT Services

- A team to guide you from commissioning to operational support
- Manufacturer visits and audits
- Installation optimisation and retrofit
- Service contracts
- Staff training.
- Access to the ETT Services hotline

myETTvision platform

myETTvision allows you to control and optimize your installation remotely.

Operating principles

The unit operates as a reversible heat pump:

> Source: outside air
> Treated fluid: inside air

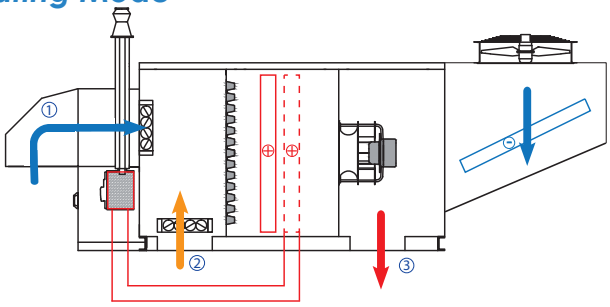
The following operating modes are available:

> Heat pump
> Air conditioning
> Free Cooling: cooling using outside air, without thermodynamics
> Heat pump + condensing boiler
> Condensing boiler

In these modes the unit can operate:

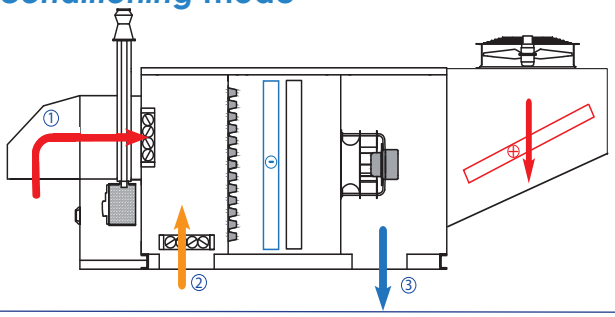
> With all recirculated air
> In all fresh air mode
> In mixed air mode

Heating Mode



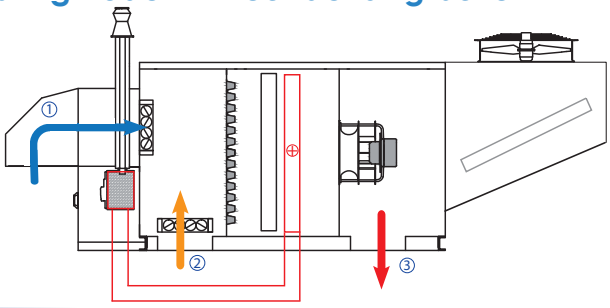
Heating Mode: The thermodynamic system and condensing boiler(s) maintain a comfortable temperature in winter (optional).

Air-conditioning mode



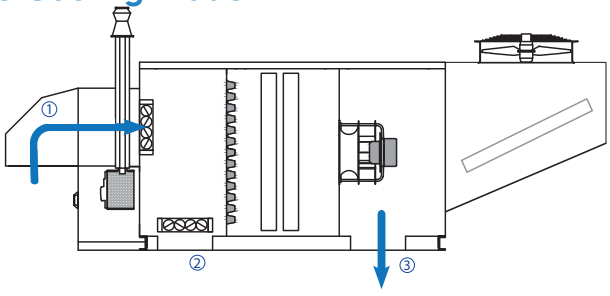
Cooling Mode: The thermodynamic system maintains a comfortable temperature in summer.

Heatingmode with condensing boiler



Heating with condensing boiler: In winter, comfort temperature is maintained thanks to the condensing boiler system.

Free Cooling Mode

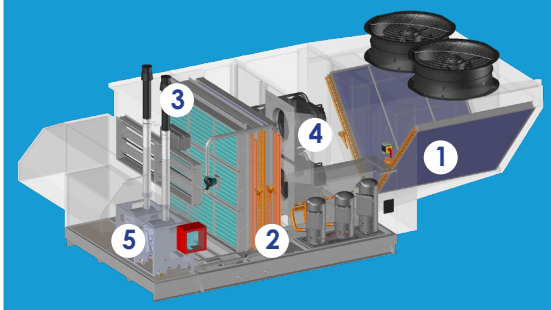


Free Cooling Mode: Mid-season comfort temperature maintained by using the temperature difference between the outside air and the inside air to cool the building.

Free Cooling **enables significant savings** to be made by delaying the thermodynamic system.

① Fresh air ② Return air ③ Supply air

Detailed components of the unit



The ETT packaged unit comprises 5 different sections:

1. An external compartment to ensure heat exchange with the environment.
2. A separate technical compartment housing the refrigerating and regulating components.
3. An internal compartment ensures air change and air treatment.
4. A sealed electrical compartment (IP44).
5. A separate technical compartment housing the condensing boiler(s) and control units.

Aluminium frame and casing assembly :

- **The Ulti+ ULTI+ R32 is equipped with a motorised, low-load, aluminium, 2-damper motorised mixing box, with Class 3 Upstream-Downstream sealing and Class B frame sealing (in accordance with EN1751):**
  - ✓ Optimized fresh air supply dosage, combined with the CO_2 sensor.
  - ✓ Free Cooling mode switch to delay thermodynamic circuit operation and allow significant energy savings.
  - ✓ **Perfect weather resistance, 20-year anti corrosion guarantee on casing.**
- **Watertight floor** with drainage outlets around the unit, connected to rubber traps.
- **Aluminium vertical panels and roof, mounted on aluminium frame.**
- A separate **technical section** facilitates unit control and maintenance and allows measurement and adjustment during operation.
- **Access through large** removable panels. The removable panels are sealed by compression on a flexible lip seal, ensuring a perfect sealing over time.
- **Sound and thermal insulation provided by 80 mm to 100 mm rock wool** (M0 classification) in the frame and by **50 mm glass wool** (M0 classification in accordance with **ERP** (Public Access Buildings) regulations, article CH36 **in the walls and roof.**
- **Optional rain proof cowl on fresh air** (to be fitted by the installer)

Aeraulics assembly:

- **Eco-design filtration,** easy to dismantle - ISO Coarse efficiency 65% (G4) in **98 mm** pleated media to increase filter life and reduce pressure drops, fouling controlled by analogue pressure switch.
- **Several levels of filtration available** to suit your project needs: ISO Coarse 65% refillable (G4) 98mm, ISO ePM10 50% (M5) 98mm, ISO Coarse 65% (G4) + ISO ePM1 50% (F7) 48+48mm, ISO ePM1 50% (F7) 98mm, ISO Coarse 65% (G4) + ISO ePM1 80% (F9) 48+ +48mm, ISO ePM1 80% (F9) 98mm.
- **Replacement filter kit available as an option.**
- **High energy efficiency propeller fans**

  As a forerunner, ETT has chosen the latest generation of fans:
  - ✓ Fitted with a variable-speed electronically commutated « EC » motor, these newly-designed fans can increase the airflow through the heat exchangers by up to 15%, while maintaining the same power consumption,
  - ✓ **Innovative blade design** - this new blade profile generates lower compressor consumption, given the lower and higher HP and LP respectively in the various operating modes,
  - ✓ Communicating for real time operation adjustment.
  - ✓ Increased diameter for unrivalled efficiency and low noise levels.
- **Last generation internal fans (High Energy Performance):**
  - ✓ **Direct transmission** (gains in maintenance, reliability and consumption),
  - ✓ **Fitted with a variable speed electronically commutated « EC »** motor combined with AFC flow measurement (easier commissioning),
  - ✓ With an aluminium wheel design,
  - ✓ Communicating for real time operation adjustment.
  - ✓ With integrated Soft Starter for reduced starting current and soft start (textile ducting).
- **Low Noise Option** available.
- **AFC option** with automatic flow adjustment to compensate for filter fouling.
- **VDF option** (power/flow rate variation) for energy consumption reduction.

Detailed components of the unit

Energy and thermodynamic assembly:

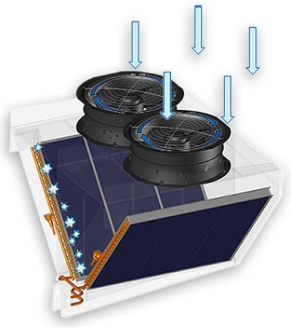
- **For units with several thermodynamic circuits,** only the first circuit is equipped with a tandem. This allows the thermal power supplied to be staggered according to the needs of the application, for less consumption and greater comfort.
- **Communicating electronic expansion valves**, combining increased optimisation of the heat exchangers and fast stabilisation of the thermodynamic system.
- Reinforced **heat exchangers** with aluminium fins and copper tubes with double helical grooves for improved heat exchange. External heat exchangers designed to delay frost build-up and ensure fast and efficient defrosting.

  Vinyl coating available on request.
- **Refrigeration circuits** compliant with the European directive on pressure equipment (PED 2014/68/EU).
- **Refrigerant** R32.
- **Tandem circuits,** for staggered power delivery and energy savings during part-load operation. Part-load operation significantly reduces defrost times and the number of defrosts required.
- **The refrigerant circuit is equipped with isolation valves at** the compression unit terminals. When working on the compression unit, these isolation valves make it easier to repair and maintain the refrigerant circuit.
- **Anti-acid filter drier.**
- Switchover**valve**.
- **Optimised defrosting** with a new external compartment design (**optimised for eco-design**).
- **Leak detection :** The ULTI+ R32 CC + is equipped with leak detection as standard. This detection allows the user to be warned in case of R32 fluid leakage. Leak detection also reduces the need for periodic visits to your equipment.

Optimised defrosting:

Defrosting principle:

- ✓ The coil frosts by condensing the moisture in the air.
- ✓ Stops the propeller fan of the defrosting circuit (with simultaneous defrosting prohibited).
- ✓ Reversal of the refrigeration system's 4-way valve: the defrosting coil switches to condenser.
- ✓ Coil drying.
- ✓ The other refrigeration circuit continues to operate normally.



Detailed components of the unit

Additional heating equipment - CC+ module:

- Premix **condensing boiler** compliant with the 2009/142/EC directive on gas appliances.
- **Highly modular output** with 1 to 4 boilers of 63 kW HHV.
- **Hot water coil** in the supply air stream.
- **Circulation pump.**
- **Expansion tank.**

This equipment ensures exchanges between two separated circuits:

- **Flue gas circuit** with suction cup installation to separate flue gas evacuation and appliance air supply - except for applications < -20°C (ETT supply to be fitted by the installer).
- **Condensing boiler** with 98% to 108% HHV efficiency.
- **Anti-acid** syphons for condensate treatment.
- **Control board** for continuous monitoring of boiler safety devices.
- **Differential pressure switch** to control boiler operation.
- Water outlet/inlet **temperature sensors**.
- **Water flow regulator.**
- **PLC** controlling all the boilers' electronic cards, enabling power modulation from 30% to 100%. The module controller and the rooftop unit controller are wired in order to adjust the air flow rate and capacity according to requirements.

Electrical assembly in a sealed compartment (IP44):

- **Electrical board** in accordance with NF EN C15-100 and NF EN 60204-01 including:
  - ✓ **An ETT PLC** with optional Control Box remote display or via native Modbus BMS.
  - ✓ **A power switch** with lockable external handle for full load cut-off. Connection using standard universal cable. Optional copper/aluminium connection boxes.
  - ✓ **A 400-230-24** volt transformer for control and regulation circuits.
  - ✓ **A fault summary** with a dry contact on stanby on terminal.
  - ✓ **Numbered terminal blocks** with disconnectable terminals for all transfers or remote controls.
  - ✓ **A terminal block** for compressor load shedding.
  - ✓ **Internal wiring** fully numbered at both ends with numbered rings.
  - ✓ **A Ik3 basic breaking capacity of** 10 kA.
  - ✓ **A phase controller.**
  - ✓ **All components** protected by circuit-breakers.
  - ✓ **The nominal LV** distribution voltage is governed by the French Interministerial Order of 24 December 2007. This sets the nominal voltage level at 230/400 V. It defines minimum and maximum values that are acceptable at a user's point of delivery (average value over 10 ml), corresponding to a range of -10 % / +10 % around the nominal values. It also defines the maximum allowable value of the voltage drop gradient: 2%. The voltage drop gradient represents the additional voltage drop created on a network point if 1 KW single-phase is added on this point. Consult us if the regulations of the country of installation require other characteristics.

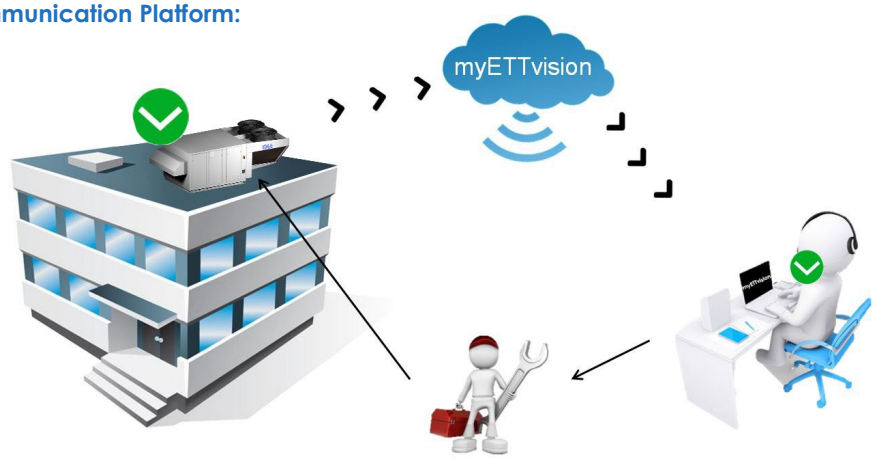
Detailed components of the unit

Advanced control assembly:

- **Temperature control with 2 cooling/heating set points: responsive, precise and anticipatory.**
  Economy or Comfort mode controls available.
- **Filters Fouling Analogue control (FFAC), measures and indicates filter fouling to the PLC**, enabling preventive filter replacement for optimum air quality and reduced consumption.
- **Real-time regulation of the speed of the propeller fans** according to operating mode, outdoor temperature and thermodynamic power, for optimum acoustic performance and energy savings.
- **Optional VDP (variable airflow / power)**, which adapts the indoor airflow according to the thermodynamic power.
- **Analogue Air Flow Controller (AFC)** for measuring and indicating the air flow rate of supply fans on the PLC, with optional auto-adjustment of the air flow rate, to compensate for filter fouling.
- **Air quality control by CO_2**, sensor to optimise fresh air dosage and reduce energy consumption.
- **Free Cooling** function: cooling with outside air, delaying thermodynamic operation for significant energy savings.
- **Optional function to prohibit Free Cooling by comparing water weights** , in order to limit latent inputs during Free Cooling phase by comparing indoor and outdoor water weights.
- **Optional indoor humidity control**, with or without energy recovery.
- **Optional all-weather kit function**, for air-conditioning operation at outdoor temperatures below 15°C.
- **Metering of electrical energy**, with breakdown of electrical consumption by operating modes.
- **Monitoring, diagnostic and safety and faults management** (anti-freeze thermostat, smoke detector, fire thermostat, HP switch, compressor MAP monitoring…), with written fault history.
- **Diagnostic help for detecting refrigerant leaks**.
- **myETTvision remote communication platform providing access to parameter setting, operation and energy monitoring, access to faults in your fleet of units**.

myETTvision:

ETT Remote Communication Platform:



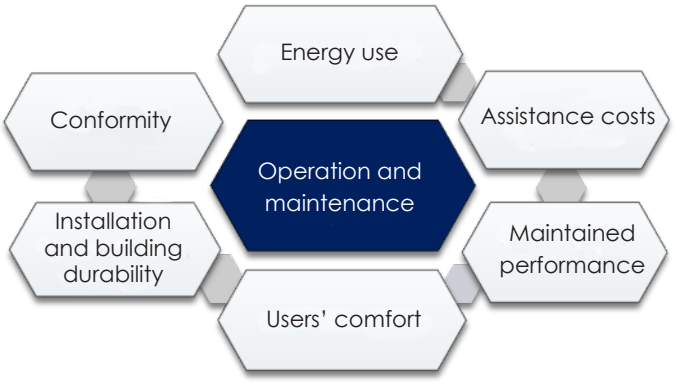
Operating tips for the ULTI+ R32 CC unit+

OPERATION: COSTS, PERFORMANCE AND GUARANTEES

The **quality of the operation** combined with the installation has a major impact on the overall **cost of the units.**

It influences 3 parameters:

- **Total cost**
  - ✓ Purchase and implementation: 15%
  - ✓ Operating costs: 85%
- **Installation efficiency**
  - ✓ Operating **costs**
  - ✓ **Users**' comfort
  - ✓ **Durability**
  - ✓ **Availability**
- **Conformity**
  - ✓ **Regulations**
  - ✓ Manufacturer's **warranty conditions**



As soon as it is commissioned, the plant must be operated and maintained in such a way as to guarantee regulatory compliance. Operating instructions aim at optimising unit performance and settings. Also, the validity of the guarantee is conditional upon strict compliance with these instructions.

Periodic checks must include, at least:

- **Checking/adjusting technical functions** (safety, ventilation, refrigeration circuits, etc.)
- **Control** adjustment (setpoints, time slots, advanced parameters, etc.)
- **Technical and regulatory** checks:
  - Leakage checking, once or twice a year
  - Initial commissioning inspection, periodic inspections and periodic re-qualifications (monitoring of pressure equipment)
  - Filters replacement, 2 to 4 times a year depending on the type of filters and installation environment
  - Checking and replacing sensitive parts of humidity sensors CO_2 sensors or smoke detectors
- Inspection and maintenance of the environment (distribution networks, irrigation probes, etc.)

ETT's **service solutions** make it possible to achieve **operational performance** and compliance **objectives** while providing **peace of mind** for the user.

Main options

Frame - Casing	▪ Aluminium double skin on internal compartment ▪ Motorised external damper for supply air, except downward air discharge (CH38 - Directive 2006/42/CE)
Acoustics	▪ Low Noise EC supply air fans ▪ Compressors soundproof jackets
Airflow section	▪ Operation with all recirculated air (excluding Public Buildings) ▪ Operation with all fresh air ▪ Actuating smoke detector with battery back-up ▪ Epoxy coating for supply air fans ▪ Analogue airflow controller (AFC) with auto-adjustment of supply fans airflow rate ▪ Pressure gauge for supply air filters ▪ ISO Coarse 65% (G4) refillable 98mm supply filters with analogue sensor ▪ ISO ePM10 50% (M5) 98mm supply air filters with analogue sensor ▪ Double filters ISO Coarse 65% (G4) + ISO ePM1 50% (F7) or ISO ePM1 80% (F9) (48 + 48mm) at supply with analogue sensor ▪ ISO ePM1 50% (F7) 98mm supply air filters with analogue sensor ▪ ISO ePM1 80% (F9) 98mm supply air filters with analogue sensor ▪ Fresh air cowl extension ▪ Defrosting damper
Thermodynamics	▪ Air conditioning only (non-reversible unit) ▪ Compressor MAP monitoring ▪ Vinyl coating on thermodynamic coils ▪ HP and LP pressure gauge
Auxiliaries	▪ Recovery hot water coil with analogue frost thermostat (if CC+ module connected as auxiliary) ▪ Auxiliary hot water coil with analogue frost thermostat (if CC+ module connected for preheating) ▪ Progressive 3-way valve for hot water coil ▪ Stop valve on outlet + TA regulating valve on inlet for hot water coil ▪ 2-stage sequential electric heaters + dry contact load shedding (if CC+ module connected for preheating)
Electrics	▪ Total electrical energy metering ▪ Aluminium/ copper connection terminal blocks (Mandatory for aluminium supply cables) ▪ 230V / 16A single-phase PC socket in the technical room (separate power supply to be provided by the installer) ▪ IT earthing system compatibility ▪ Cable cover for external power supply (to be fitted by the installer)
Installation	▪ Adjustable aluminium connection roof curb ▪ Aluminium connection adaptor roof curb ▪ Adjustable ventilated aluminium roof curb ▪ Ventilated aluminium adaptor roof curb ▪ 200, 400 or 600mm aluminium feet

Main options

Control	▪ All-season operation (compressor authorisation in air-conditioning mode with outside temp. < +15°C) ▪ Control function in Comfort mode (setpoint temperatures control by PID) ▪ Free Cooling banning based on specific humidity comparison ▪ VDP operation (Variable Flow Power) ▪ HPE+ operation (High Energy Performance) ▪ Dehumidification function level 1 (without heating capacity recovery) ▪ Dehumidification function level 2 (with heating capacity recovery & on/off refrigeration 3WV) ▪ Average room temperature (4 sensors) ▪ Minimum fresh air slaving using turret contacts (3 maximum)
Gas	▪ Connectable gas metering (delivered dismounted - external mounting by the installer). ▪ Gas pressure regulator 300-20 mbar fitted (different according to types of gas) ▪ Condensing boilers used for preheating ▪ Condensing boilers used as auxiliaries
Communication	▪ myETTvision ▪ ETT 'Control Box' remote touch display ▪ CCAD remote display ▪ Native RS485 Modbus ▪ Modbus IP ▪ BacNet IP
Warranty	▪ Please contact us.

GAS CONNECTION

The gas supply must correspond to the thermal module capacity and feature all appropriate security and control devices (such as a stop valve) according to the applicable standards.

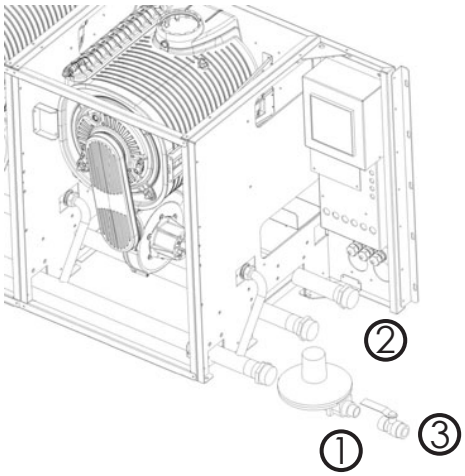
Pipe diameters shall be specifically studied, considering gas type, gas flow rate and pipelines length. Pipes pressure drop must not exceed 5 % of the supply pressure.

The gas thermal module is intended for low pressure gas supply, below 50mbar.

In case of higher supply pressure, install a flow regulator suitable for the total installed power (available as an option, to be fitted by the installer).

In case of serial connection, install a single regulator manifold.

1 - Gas inlet
2 - Gas expansion valve
3 - Stop valve

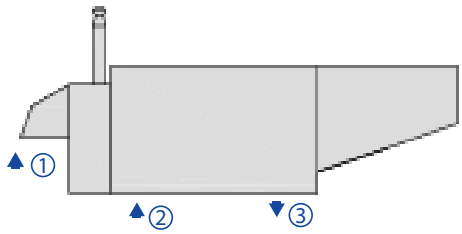


Nota: For simultaneous operation, the main network pressure regulator must be suitably dimensioned to handle the maximum flow from all equipment installed on the network.

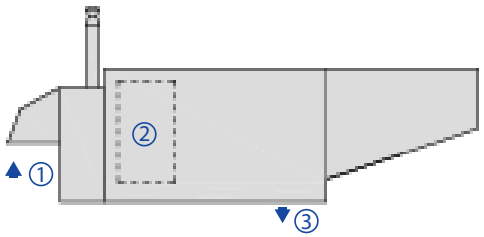
Aeraulic arrangements

Downward *supply air*
Installation on roof curb or on customer frame

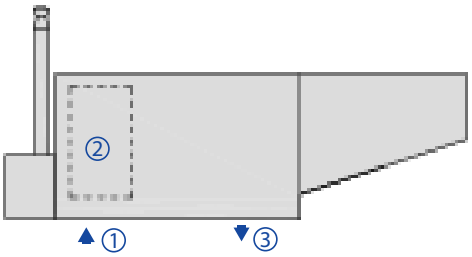
Arrangement 1.1



Arrangement 1.8

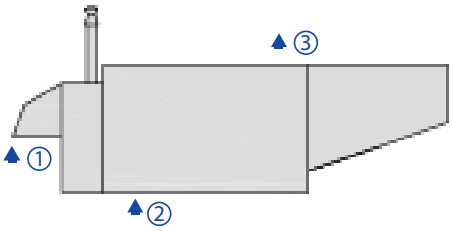


Arrangement 1.10

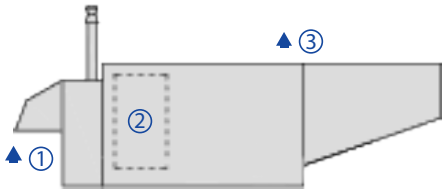


Upward *supply air*
Mounted on feet (minimum 400 mm) or on customer frame.
Feet are optional. For a machine of more than 10,000^3/h in an ERP building, a supply air damper must be provided.

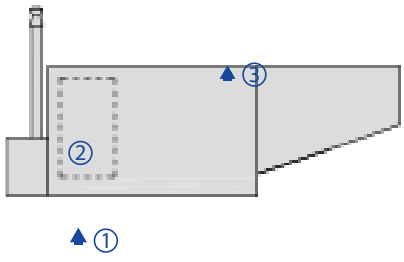
Arrangement 2.1



Arrangement 2.8



Arrangement 2.10

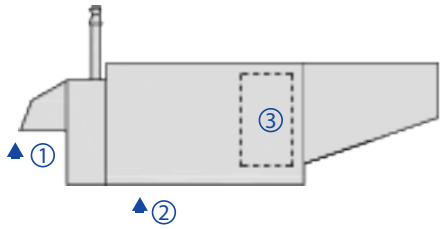


① Fresh air ② Return air ③ Supply air

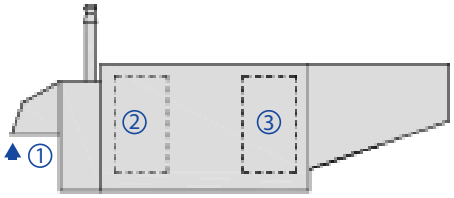
Aeraulic arrangements

Side *SUPPLY AIR*
Opposite the technical section (with 400 mm feet minimum)

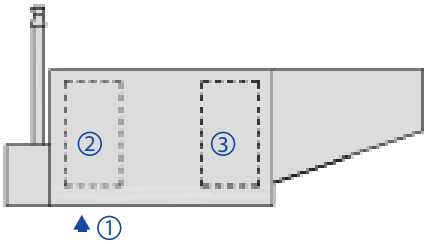
Arrangement 3.1



Arrangement 3.8



Arrangement 3.10



① Fresh air ② Return air ③ Supply air

Auxiliary: Sequential electric heaters

Dehumidification option
with heat recovery by in-line condenser

The dehumidification option adds the ability to regulate humidity levels in the treated volume to the operation of the heat pump. This function is particularly well-suited to large and medium-sized stores, where the increasing installation of closed refrigeration units means that the air-conditioning system has to deal with latent supply.

This option is available in several configurations to suit the context of each project.

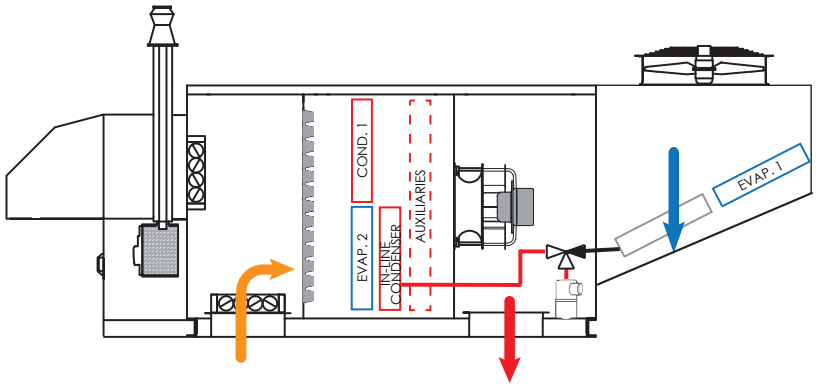
The return air passes over the evaporator(s) where the humidity in the air is condensed.

The heat extracted in this way can be redistributed using the in-line condenser (optional). The heating capacity of the thermodynamic cycle is thus returned to treated air.

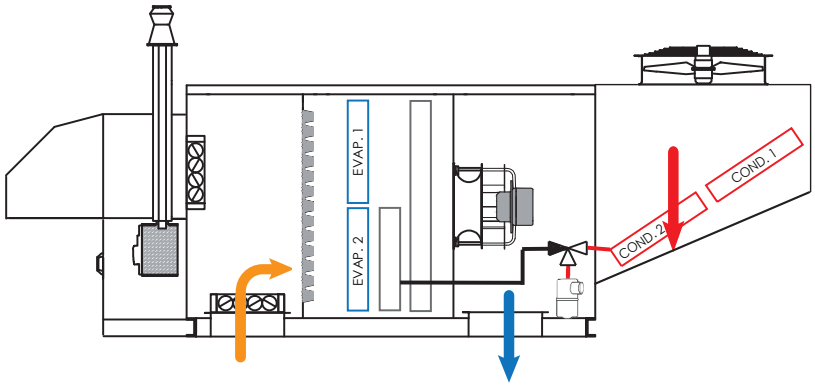
The heat can also be rejected to the outdoor condenser (cooling).

Depending on outdoor and indoor conditions, the control system can dehumidify by introducing fresh air, thus delaying the start-up of the thermodynamic system.

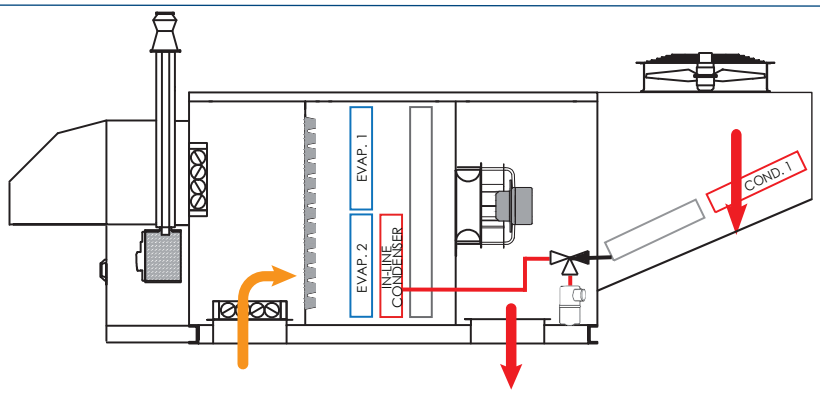
Winter



Summer



Mid-season



Dehumidification option
with heat recovery by in-line condenser

LEVELS OF OPTIONS PER CIRCUIT

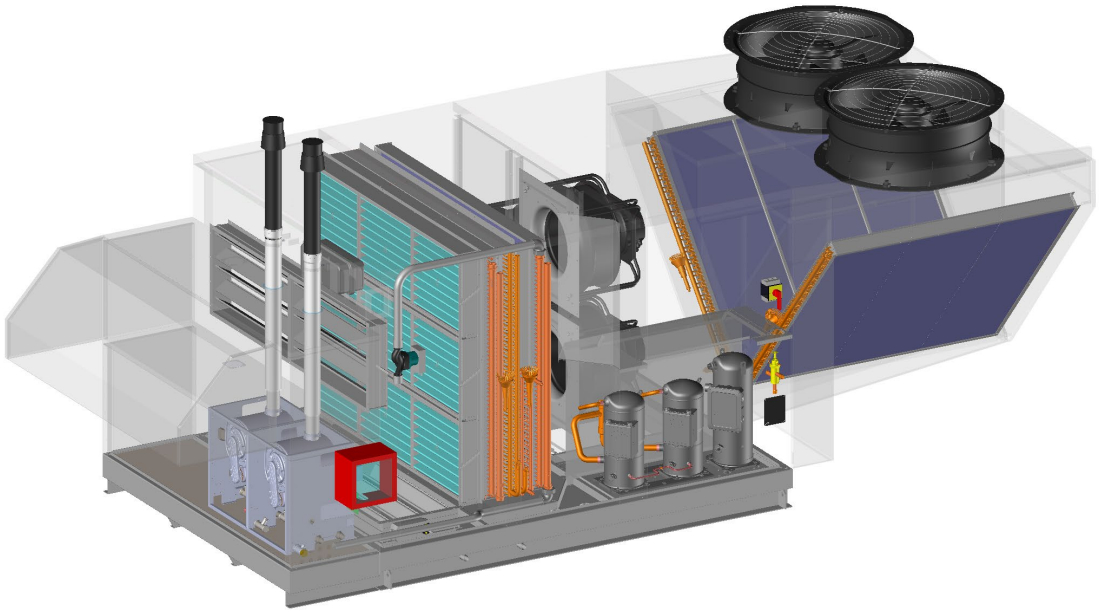
Level 1:

Dehumidification without energy recovery. The refrigeration circuit is fitted with an all-weather kit for dehumidification in winter. The heat is evacuated to the external condenser.

Level 2:

Dehumidification with energy recovery through in-line condenser, on/off refrigeration 3-way valve (for one circuit) and year-round kit (for all the circuits). The heat recovered is transferred either to the air stream or to the external condenser depending on the season or on the supply air temperature setpoint.

Whatever the level, an additional auxiliary can be installed depending on the context of the project for operation in winter.



Dehumidification option
with heat recovery by in-line condenser

(1) At 80% of nominal airflow, for an outside temperature of +35°C, saturation at 95%.
(2) At 80% of nominal airflow, for an outside temperature of +7°C, saturation at 95%.

Sensors connection principle

- ① **Room sensor:** 1 pair shielded cable, 2 x 0,75 mm² LIY-CY (max.length. 100 lm)
- ② **CO_2 sensor:** 2-pair shielded twisted cable, 3 x 0.75 mm² LIY-CY (max. length 100 lm)
- ③ **Humidity sensor:** shielded twisted cable, 5 x 0,75 mm² LIY-CY (max. length 100 lm) (Optional, replaces the room sensor)

Nota: Please note that the value indicated can vary depending on sensor location. For more representative results, do not install them:

> near a heat source (spotlights, cooking appliances, glass walls, chimney ducts);
> in draughty areas (near storerooms, entrances, openings, etc.);
> in dead zones (back of shelving, corners of buildings);
> close to high-traffic areas (checkouts, fitting rooms).

- To avoid disrupting the measurements:
  > the sensors must not be located in the axis of the duct used for their wiring, otherwise they may be disturbed by a parasitic air flow;
  > the routing of control cables must be separate from the routing of power cables (risk of electromagnetic interference).

Accessories for installation: Roof curbs

DESCRIPTION

The roof curb provides the interface between the roof and the rooftop. Its design makes it easy to mount on roofs and simplifies installation of the machine.

Standard curb on header:

Adjustable connecting curb:

- Complies with French standard NF P 84-206-1 (installation of corrugated steel sheet roofs with a waterproofing coating) and fire regulations for Public Access Buildings (French Order of 14 February 2000).
- A one-piece aluminium curb that is significantly lighter than a galvanised steel curb.
- Adjustable angles to compensate for the slope of the roof. Other slope percentages are available on request (option). In this case, specify the percentage and direction of the slope when carrying out the work.
- Skirtboard for up to 100 mm of insulation according to RT 2005 specifications.
- The roof curbs are designed for a maximum height of 145 mm for the steel panel and 200 mm for the insulation (i.e. maximum height H = 345 mm).
- Lifting lugs for easy positioning when craning.
- Interior side insulation in Stopflam 20 mm, to limit the risk of condensation.

Adjustable ventilated curb

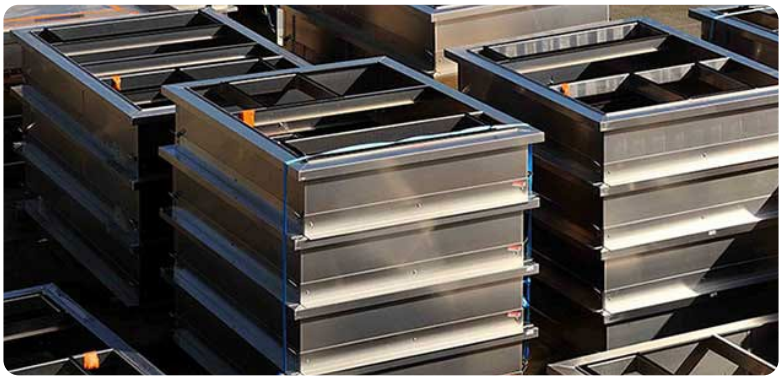
In addition to the 7 points listed for the "adjustable connecting curb":

- 200 mm ventilated air section. The machine is bolted to 4 (or 6) feet and sealed with a foam gasket on the frames of the supply and return ducts.
- The air gap also provides acoustic insulation, significantly reducing the noise radiated from the underside of the machine.
- The outlets of the supply and return ducts and the roof of the ventilated curb are insulated with 25 mm thick glass wool with protective fleece. The insulation is welded to the sheet using aluminium clips, providing a better hold than glued solutions. Insulation limits heat loss and prevents condensation on the underside.
- Sleeves for routing power supply cable and hot water coil pipes through the underside of the machine.

Adaptation curb:

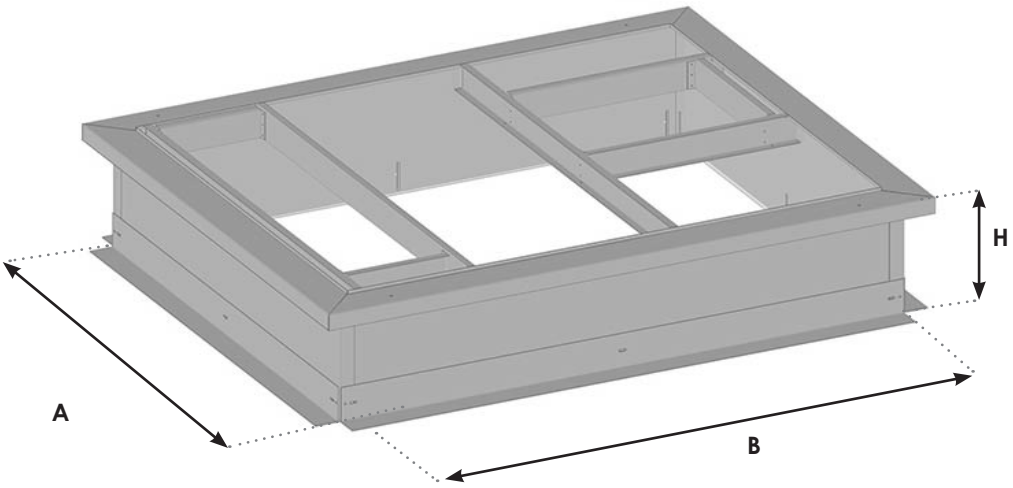
on existing header or curb

- Custom-made roof curb to fit all types of existing curbs or headers according to dimensions supplied by the installer (see our special clauses for this type of material).
- Complies with French standard NF P 84-206-1 (installation of corrugated steel sheet roofs with a waterproofing coating) and fire regulations for Public Access Buildings (French Order of 14 February 2000).
- A one-piece aluminium curb that is significantly lighter than a galvanised steel curb.
- Possible compensation for the slope of the roof. To be checked with the Engineering and Design office.
- Internal insulation.



Accessories for installation: Roof curbs

ADJUSTABLE CONNECTING ROOF CURB



ATTENTION: With this type of roof curb installation, the installer is responsible for the ten-year roofing guarantee.
If the value of the slope is greater than that in the table below, you must send us (see MARK-NOT_55-EN_ Measurement_ Form):

- the value of the slope of your roof in %,
- the direction of the slope
- the orientation of the machine in relation to the slope of the building
- the thickness of the waterproofing complex (insulation + steel deck + membrane)

The roof curbs must be counter-drilled after assembly. **The machine must be bolted to the roof curb**. Putty must be applied to the underside of the machine frame.

Dimensions of the recess (mm)	A	B	H	Overall width	Overall length	Overall height	Max. slope length (%)	Max. slope width (%)	Weight (kg)
ULTI+ R32 01 CC+	1,320	1,970	550	1,534	2,178	568	5.0	7.5	76

Accessories for installation: Roof curbs

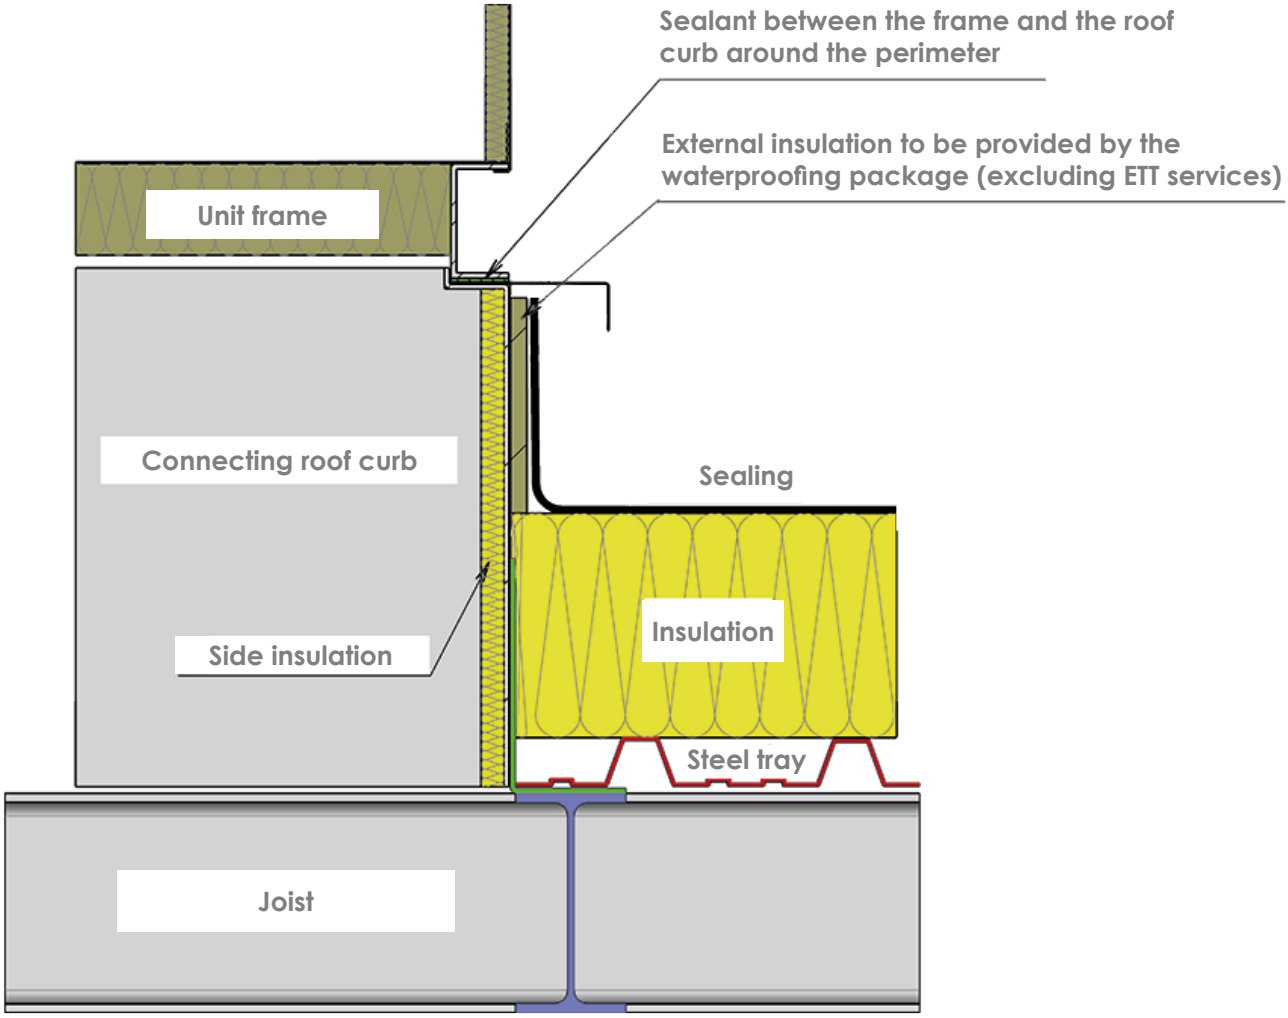
HOW TO INSTALL ROOF CURBS

The diagram below is a schematic diagram, conforming to French standard DTU 43.1 (Sealing of flat roofs and pitched roofs with load-bearing masonry elements in lowland climates):

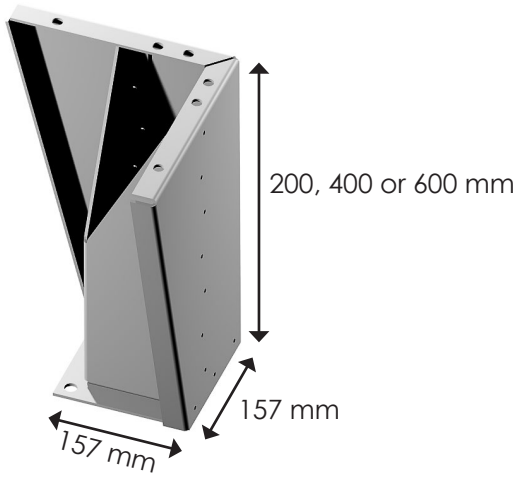


Note: The curbs are designed for a maximum total height of 345 mm of steel tray and insulation.
To maintain a standard curb height (refer to the curb drawing), you need to check that, depending on the slope of the roof on site, the 'insulation and steel tray' height dimension leaves sufficient insulation height in accordance with French standard DTU 43.1.

An optional blanking plate can be supplied to protect the building from the bad weather between the installation of the curb and the unit.

Installation accessories: Feet

Aluminium fixed foot
Unit weight: 1 kg



The feet are mounted on the corners of the frame. For ULTI+R32 - 23 CC+ frames, two additional feet are required in the centre of the casing.

	ULTI+ R32 01 CC+	ULTI+ R32 11 CC+	ULTI+ R32 12 CC+	ULTI+ R32 21 CC+	ULTI+ R3 22 CC+	ULTI+ R32 23 CC+
No. of feet	4	4	4	4	4	6 (*)

(*) The central feet have a 200 x 200 mm base (instead of 157 x 157 mm).
